Designing Homes That Are Beautiful, Practical & Ready to Build

From concept planning to complete construction drawings and expert project consultancy, with a dedicated technical team comprising IITians, architects, and engineers, we help you build your dream home with confidence.

ABOUT THE STUDIO

Three decades of building. One studio for drawing.

1988 ESTABLISHED	35+ YEARS ON SITE	8 MANAGED PROJECTS	6 DESIGN DISCIPLINES
---------------------	----------------------	-----------------------	-------------------------

Jindal Design Studio is the architectural planning arm of Jindal Construction Company — a trusted name in turnkey residential, commercial and government infrastructure across Madhya Pradesh. Our drawings carry three decades of on-site wisdom, so what you plan is exactly what gets built — efficiently, elegantly and within budget.

For over 35 years, Jindal Construction Company has been trusted with turnkey residential, commercial and government infrastructure projects across Madhya Pradesh. Along the way, we noticed a persistent gap between the drawings clients received from their architects and what could actually be built on site — cost overruns, structural rework, missing details, awkward services routing.

Jindal Design Studio was founded to close that gap: clients needed architects who understood not just design, but the realities of construction. We're not just architects who draw beautiful buildings — we're builders who design them. This unique perspective ensures every plan we create is practical, cost-effective, and ready for seamless execution.

We work primarily with homeowners, builders and property developers across India — from single bungalows and duplexes to apartment blocks, commercial spaces and modern villas.

Three generations of builders. One studio that draws every line with construction in mind.

WHAT SETS US APART

Drawn for the way a house is actually built.

The design division of a construction house with 35 years on site.

35+ Years of Industry Experience

Decades of experience have given us a deep understanding of design, construction and on-site execution. We combine proven practical knowledge with modern design thinking. Every project benefits from lessons learned across years of real-world experience.

Government Registered

Our professional practice is supported by the required government registrations and compliances. This reflects our commitment to operating with professionalism and accountability. You can engage with a structured and responsible design team.

ISO Certified

Our ISO certification reflects our commitment to systematic processes and quality standards. We focus on consistency, documentation and disciplined project execution. Quality is treated as a process, not just a promise.

IITian Expertise

We bring strong technical expertise and engineering-led thinking to the design process. This helps us evaluate designs not only for aesthetics, but also for practicality and performance. Our approach combines design creativity with sound technical reasoning.

Experienced Engineering Team

Our team brings together experience across architectural planning, structural requirements and construction execution. We look beyond the drawing to understand how a design will actually be built. This helps reduce avoidable errors and improve coordination at site.

Client-First Approach

Your lifestyle, requirements, priorities and budget form the starting point of our design process. We listen first, explain the available options and develop solutions around your needs. Our objective is to help you make informed decisions — not simply sell you a design.

Transparent Pricing

We believe clients should clearly understand what they are paying for. Our scope, deliverables and charges are communicated clearly from the beginning. This helps create a straightforward and trustworthy working relationship.

No Hidden Charges

We believe transparency should continue throughout the project, not just at the beginning. There are no surprise charges hidden behind unclear commitments. You get clarity about the scope and associated costs before moving ahead.

WHAT WE BELIEVE

Design with execution in mind

Every plan is drawn by architects who have watched their own drawings get built. No surprises on site.

Cost-conscious planning

Structural efficiency, standard module sizes and honest material choices — we help you save without cutting corners.

Vastu-friendly options

Where clients wish, we offer Vastu-aligned layouts without compromising light, ventilation or flow.

Transparent process

Clear deliverables, clear timelines, clear pricing. You always know what's happening and why.

SERVICES

A complete studio, under one roof.

Architecture, structural drawings, project consultancy and interiors — coordinated by a single team.

OUR PROCESS

Five steps. One conversation at a time.

From concept planning to complete construction drawings and expert project consultancy, with a dedicated technical team comprising IITians, architects, and engineers, we help you build your dream home with confidence.

01	02	03	04	05
Free consultation	Site analysis & concept	Plan & 3D elevation	Structural & working drawings	Site consultation
Understanding your requirements, lifestyle, budget, and vision through an initial consultation.	Evaluating the site, its dimensions, orientation, surroundings, and possibilities to develop the right design concept.	Collaborating with you to refine and finalize the floor plan, spatial layout, and 3D elevation.	Providing detailed structural, architectural, and working drawings required for accurate execution at site.	Providing technical guidance and periodic site consultation to help ensure the design is executed with clarity, quality, and attention to detail.

INTERIOR DESIGN

Interiors planned with the architecture.

Interior work sits inside this portfolio rather than beside it, so the layout you sign off and the rooms you live in are drawn by the same studio.

SELECTED WORK

Drawn for the way a house is actually built.

Architecture, interiors and three-dimensional studies. Interior work lives here, with the projects.
